(b) (4),

Mike, Jim, and I discussed the grading plan a little further after you left. I guess we did not really come up with anything new, but Mike asked me to summarize our concerns and convey them to you to make sure we are on the same page here.

The main points are:

- There should be a rather large flat or relatively flat area of land suitable for future use. Perhaps it can be located on the top of the bank. May be that can be reached by lowering elevations of the entire area down to 10 (11, or 12) ft – depending on whether we have space to put all the extra soil.
- There is no concern about extra earth movement as long as we get that flat area on the top of the bank and at the same time have proper drainage.
- There is no concern about the area that will be covered. As long as it is within the city line (including the fenced property on the northern end of the site) – we are fine. *All that area will be covered regardless of whether we place the cut soil on it or not!* Although it is not included into our Area of Concern, sampling results showed relatively high levels of lead in those areas, and they should be covered anyway.
- Petraflex brochure says 2:1 slope is max you can do without anchoring. Mike feels we should just stick to 3:1, but you might want to discuss that with him, depending on what you find out from the company rep.

Hope that does not add any confusion or very much extra work. Please give us a call here this afternoon to discuss Petraflex, and any other questions you might have.

Sincerely,

(b) (4)

COMMENTS: Validated Data Summary for 12th St. Dump
Site. Please call with any questions. I'm working to have
threat characterized by early December. Human health threat may
be low. Environmental threat may be elevated. -Mike.
Please forward to appropriate city officials.
